

# Helps – Large Language Library

Helps is an AI-native library built for group interaction and expert participation

**Problem:** Traditional books are expensive to create and don't "talk" to their readers. This limits people's ability to access and understand knowledge.

**Opportunity:** High quality non-fiction books can be created from LLMs quickly and cheaply. Readers can ask until they understand.

Role-play: Interview for Wall Street

**Product:** LLM generated books and personalized, scenario-based AI group chats. Chat categories include tutors, role-play, discussion, and search. A network of experts is available to be invited into chats. AI is used throughout for continuous product development and improvement.

**Business Model:** (1) Experts pay per chat invitation, (2) Users pay for expert participation (3) Users pay to join chats.

**Go-to-Market:** Our first market is students and instructors at the University of Kentucky. Role-play chats are being used for interview and pitch practice. Tutor chats are being used for instruction. Instructors are using discussion chats during class.

**Traction:** Over 250 registered users. Active usage in over 5 college classes with strong positive feedback. 8 registered experts. 140 book created.

**Founders:** [Shane Hadden](#) and [Chad Hurley](#). Shane built the initial product for his classes. Chad is the technology lead. They are experienced founders who have worked together for years.

**Vision:** AI will reverse the diffusion of knowledge acquisition and validation created by the internet. Libraries will re-establish their role as trusted stewards of knowledge in a for-profit model and quickly grow to be among the largest and most impactful companies. [Read more.](#)

**Dream:** Establish Helps in Kentucky as the Fort Knox of knowledge.
